How To Reset Your PS3 Video Output.

When we service your PS3 Console we use HDMI Cables to run it in High Definition. This allows us test your Console at its fullest potential. At times we may have to rest your video settings to do this.

If you have received your PS3 back from us and there is no picture on the screen, then you will have to perform a video reset as described below.

1. Turn PS3 OFF to STANDBY that the red light is on
2. Press the on button, leave your finger on the button
3. You should be able to hear the initial beep, followed by another beep soon after
4. Once you have heard the second beep, lift your finger from the power button
5. Your screen will now go black then re-initiate
6. At this stage press the "PS Button" on your PS3 Controller
7. Finally follow the onscreen prompts to finalise the Video Output Settings

If you have followed these instructions and still have problems, please call us on the Phone number above.

Regards
The "Byte Me" Team
